To whom it may concern,

November last year, we had our clinic's lights upgraded to LED through Direct Energy Solutions. James assessed the premises and we received a report on the same day which stated how much we can save on our power bill and lighting maintenance by upgrading to LED as well as how much brighter our clinic would be after the changeover. There also was a calculation of 2.6 years of simple payback time, for the project, based on cost and the savings.

The team at Direct Energy Solutions were very accommodating to our customizations and preferences all throughout the planning and we were also informed that it will take longer for our installation procedure to be carried out, due to the amounts of projects that they were dealing with at the same time.

After a few weeks they finally scheduled an installation date that would suit our timetable and installed all the lights within just 2 days. Ever since, we are enjoying a much brighter and clearer working environment, as well as a large drop in our power bill.

I strongly recommend Direct Energy Solutions to anyone that wants better lighting, no mercury or glass, instant start or simply as our experience with them has been very easy and hassle free and it's a better investment than leaving money in the bank. Please do not hesitate to contact me for any questions.
