To whom it may concern:

Re: Direct Energy Solutions

It is with great pleasure that I write this letter in recommendation of the products and services of Direct Energy Solutions (DES) with particular regards to their high bay LED lights.

DES completed a complete upgrade of our existing lighting in the warehouse in March of this year. The consultation prior to installation was personal and they worked hard to understand what were after and offered a solution to match.

The installation was very timely and with little disruption to our operation. Since the installation, we have enjoyed many benefits including better light output, a quieter and safer work environment and also excellent savings on our power bill (which has almost halved).

Other benefits have included an increased level of productivity as the environment in which we are working has visibly improved which has had an impact on the morale of the team and in turn productivity.

Post installation, the team at DES have been in touch several times to ensure that the solution they offered is working (which it is) and if they can be of further assistance any way.

My only wish is that we had upgraded the lights sooner.

I am happy to recommend the services of DES and I am available to answer any questions regarding their products and services.

Kind regards

Andrew Sesani
